ENTERPRISE READY

Prepared for SinLess Games LLC - Internal pricing, packaging, legal, and implementation review

DOCUMENT CONTROL

Pricing Model v3

A branded pricing and packaging specification for Aerealith AI.

Field	Value
Official brand name	Aerealith AI
Document name	Aerealith AI Pricing Model
Version	Version 3
Owner	SinLess Games LLC
Purpose	Define public pricing, internal entitlements, add-ons, billing behavior, marketplace rules, and implementation boundaries.
Review status	Internal planning and review draft
Source baseline	Rebuilt from Docs/pdf/aerealith-ai-pricing-model-branded-v2.pdf
Prepared date	2026-05-31

Directive model. The tiers, limits, formulas, add-on rules, entitlements, billing behaviors, and feature boundaries in this document represent the current intended pricing model for implementation, validation, business review, and legal review.

8

PUBLIC BASE TIERS

Free through Enterprise.

\$3/mo

ENTRY PRICE

Affordable personal adoption path.

25M

PRO+ API VOLUME

Monthly API requests before add-ons.

Free

SELF-HOSTED RUNTIME

Open-source local-first runtime with optional SaaS bridge.

Table of Contents

01	Brand Alignment Brand, voice, colors, and pricing design rules.	02	Pricing Architecture Core model, public packaging, and expansion rules.
03	Base Tiers Public tier ladder, personas, and plan positioning.	04	Entitlement Matrix Capacity, memory, API, automation, and retention limits.
05	Feature Distribution Feature availability by tier and roadmap surface.	06	Pricing Math AI credit allocation and cost-budget formulas.

07	Storage and Memory Storage, hosted memory, knowledge capacity, and retention.	08	API and Automation Developer access, weighted requests, and automation model.
09	Self-Hosted Bridge Local runtime, metering boundary, and SaaS fallback.	10	Add-On Catalog AI, automation, storage, memory, knowledge, support, and governance packs.
11	Payments and Commerce Billing, embedded commerce, fraud, disputes, and payment partner needs.	12	Marketplace and Enterprise Publisher levels, revenue rules, and enterprise packages.
13	Implementation Architecture Entitlements, metering, billing, bridge auth, and policy services.	14	Final Operating Rules Rules that anchor the pricing model.

PART 01

Brand, pricing logic, and public packaging

The pricing system must feel trustworthy, transparent, modular, and consistent with Aerealith AI's user-controlled assistant identity.

01

Brand Alignment

Pricing materials follow the Aerealith AI brand foundation, color system, visual language, and trust-forward product direction.

Brand foundation
OFFICIAL POSITIONING

Aerealith AI is a secure, user-controlled digital companion and intelligent command center built to connect apps, memory, automations, dashboards, communities, and workflows into one trusted assistant experience.

Pricing voice
VOICE RULE

Pricing language should be calm, precise, permission-aware, and clear about limits, actions, memory, and data use. It should avoid hype while still feeling advanced and premium.

Token	Hex	Pricing Use
Aerealith Pink	#F6066F	Signature identity accent, tier emphasis, primary highlights
Ether Cyan	#00DBC9	Technology, intelligence, usage indicators, bridge flows
Deep Night	#050A1E	Primary dark cover, dividers, high-trust panels
Void Navy	#08071B	Secondary dark surface, table headers, architecture panels
Aurora Violet	#8C52FF	Bridge color, roadmap emphasis, governance and workflows
Soft Starlight	#F7F4FF	High-contrast text on dark surfaces
Mist Gray	#AEB7C8	Secondary text, borders, and neutral UI details

Trust-first layout

Show consent, exports, deletion, audit logs, scoped access, data ownership, and AI limitations as part of the buying story.

Readable first

Tables, pricing comparisons, and legal terms must remain readable. Decorative typography is reserved for short labels and section breaks.

Gradient as accent

Use the pink -> violet -> cyan gradient for mark emphasis, active states, section rules, and metric graphics - not as body text.

02

Pricing Architecture

The model balances accessible entry pricing, local control, paid managed infrastructure, professional controls, and enterprise obligations.

Core Rule

Base tiers define access and included capacity. Add-ons define expansion and specialization. Users can scale one capability at a time instead of being forced into a broad upgrade when only one resource is constrained.

Base tier purpose

Defines access, included capacity, support expectations, governance depth, and public plan positioning.

Add-on purpose

Expands usage and specialized capabilities without forcing unnecessary upgrades.

Self-hosted runtime purpose

Preserves openness, developer access, and local control while allowing optional paid SaaS bridge resources.

Enterprise purpose

Captures support, compliance, contractual obligations, deployment complexity, data residency, and dedicated infrastructure.

Packaging Principles

- Users own and control their data.
- API access is usage-limited, not paywalled.
- Self-hosting remains practical and open source.
- Local-first workflows are preserved wherever feasible.
- Enterprise pays for obligations, support, compliance, and deployment complexity.
- Add-ons expand capability and capacity without punitive gating.
- Public plans remain understandable while internal entitlements remain precise.

03

Base Tier Layout

The public pricing ladder remains affordable while supporting modular expansion revenue and enterprise contracts.

Tier	Price	Target User	Core Role
Free	\$0/mo	New users, students, hobbyists	Platform introduction
Basic	\$3/mo	Personal users	Everyday productivity
Basic+	\$6/mo	Creators and power users	Customization and integrations
Premium	\$10/mo	Advanced users	Automation and AI workflows
Premium+	\$15/mo	Developers and prosumers	Advanced tooling

Tier	Price	Target User	Core Role
Pro	\$20/mo	Teams and businesses	Collaboration and scale
Pro+	\$25/mo	Growing organizations	Governance and visibility
Enterprise	Custom	Large organizations	Compliance and dedicated infrastructure

Public Group	Internal Tiers	Public Message
Explore	Free	Try Aerealith AI and learn the platform.
Personal	Basic, Basic+	Affordable assistant, memory, and light integrations.
Power	Premium, Premium+	Automation, advanced AI workflows, and developer tools.
Team	Pro, Pro+	Collaboration, governance, analytics, and higher limits.
Enterprise	Enterprise	Compliance, dedicated support, custom deployment, and air-gapped operation.

- Custom cloud storage

04

Tier Positioning Detail

Each tier has a public role, an internal monetization role, and a likely upgrade trigger.

Tier	Public Promise	Internal Monetization Role	Likely Upgrade Trigger
Free	Start using the assistant and self-hosted runtime.	Onboarding, developer adoption, community growth.	Needs more AI credits, automations, memory, or API volume.
Basic	Low-cost personal assistant with stronger continuity.	Affordable conversion tier with low support burden.	Needs integrations, persona tools, or more memory.
Basic+	Creator-friendly plan with community and plugin foundations.	Creator and community monetization entry.	Needs automation, multilingual support, or heavier AI workflows.
Premium	Primary paid power-user automation plan.	Main individual revenue tier.	Needs developer capacity, IoT, live search, or advanced runtime tools.
Premium+	Prosumer and developer-oriented individual tier.	Advanced individual tier with add-on attach potential.	Needs team collaboration, governance, or per-tenant controls.
Pro	Small team and business foundation.	Business expansion tier with governance attach.	Needs higher capacity, dashboards, or organization analytics.
Pro+	Advanced team and operations plan.	High-value team tier before Enterprise.	Needs contractual support, compliance, data residency, or dedicated deployment.
Enterprise	Custom enterprise, hybrid, self-hosted, or air-gapped model.	Contract revenue, deployment services, compliance, and support.	Contract renewal, expansion, private marketplace, or dedicated capacity.

PART 02

Entitlements, quotas, and feature boundaries

Pricing is implemented through resources, capabilities, quotas, scopes, and plan grants - not hard-coded tier checks.

05

Master Tier Entitlement Matrix

All core included resources in one comparison view.

Tier	Price	AI Credits / Month	Active Automations	Automation Runs / Month	API / Month
Free	\$0/mo	250	3	100	25,000
Basic	\$3/mo	750	10	1,000	100,000
Basic+	\$6/mo	1,800	25	5,000	300,000
Premium	\$10/mo	3,500	75	15,000	1,000,000
Premium+	\$15/mo	5,250	150	40,000	2,500,000
Pro	\$20/mo	7,000	300	100,000	7,500,000
Pro+	\$25/mo	10,000	750	300,000	25,000,000
Enterprise	Custom	Custom	Custom	Custom	Custom

Tier	Cloud Storage	Hosted Memory	Knowledge Storage	Max Knowledge Docs	Memory Retention
Free	5 GB	500 MB	2.5 GB	250	30 days
Basic	10 GB	1 GB	5 GB	500	90 days
Basic+	25 GB	2.5 GB	10 GB	1,000	180 days
Premium	50 GB	5 GB	25 GB	5,000	1 year
Premium+	100 GB	10 GB	50 GB	10,000	2 years
Pro	250 GB	25 GB	100 GB	25,000	3 years
Pro+	500 GB	50 GB	250 GB	50,000	5 years
Enterprise	Custom	Custom	Custom	Custom	Contract-defined

Free baseline: The Free tier starts with 5 GB cloud storage, 500 MB hosted memory, 2.5 GB knowledge storage, 3 active automations, 100 automation runs, and 25,000 monthly API requests.

06

Feature Distribution by Tier

The product roadmap surface is packaged by maturity, capacity, governance, and operational complexity.

Tier	Focus	Included Feature Set
Free	Entry-level assistant and chat	Multimodal chat, contextual memory lite, starter dashboards, Discord integration lite, basic knowledge base access, feature flags, web app, and self-hosted runtime.
Basic	Personal use	Expanded memory, fact tracing and citations, knowledge viewer, basic SDK/API access, RBAC/ABAC foundation, and stronger continuity.
Basic+	Power users and creators	Community bot suite, custom commands and macros, knowledge creation, tool and skill runtime, community management, persona engine, open plugin API, scoped memory access, and marketplace participation.
Premium	Advanced companion and automation	Natural-language automation, memory redaction, security insights, API integrations, multilingual support, workflow automation, and deeper personalized support.
Premium+	Developer/prosumer	IoT agent support, live web search and scraping, Linux runtime integration, advanced memory controls, chaos testing, and higher developer capacity.
Pro	Small business and technical teams	Hybrid inference router, plugin API at team scale, scoped memory governance, usage and token meters, zero-trust foundation, and per-tenant secret isolation.
Pro+	Growing teams and advanced operators	Higher limits, advanced automation capacity, Grafana dashboards, deeper integrations, expanded governance, team analytics, and shared observability.
Enterprise	Large-scale organizations	Air-gapped deployment, self-hosting support, private marketplace, zero-trust architecture, audit logging, compliant modes, OTEL dashboards, governance toolkit, SSO/SCIM, and data residency.

Feature gating rule: Feature availability should be controlled by entitlement keys and quota records, not by scattered checks against a tier name.

07

Feature Roadmap Matrix

Advanced capabilities are governed by entitlements and may also be sold as add-ons or Enterprise grants.

Core Assistant

Feature	Status	Tier Range	Pricing Role
Multimodal Chat Interface	In Development	Free -> Enterprise	Baseline assistant surface across text, voice, web, and Discord.
Contextual Memory System	In Development	Free -> Enterprise	Core personalization and continuity layer.
Hybrid Inference Router	In Development	Pro -> Enterprise	Advanced routing for cost, latency, privacy, and local/cloud selection.
Persona Engine	Planned	Basic+ -> Enterprise	Tone, behavior, and preference presets.
Tool and Skill Runtime	In Development	Basic+ -> Enterprise	Sandboxed action execution and plugin runtime foundation.
Natural Language Automation	Planned	Premium -> Enterprise	Converts workflow requests into reliable automations.
Live Web Search and Scraping	Planned	Premium+ -> Enterprise	Real-time information gathering and summarization.
Fact Tracing and Citations	Planned	Basic -> Enterprise	Source-backed answers and audit replay.

User and Community

Feature	Status	Tier Range	Pricing Role
Aerealith Community Bot	In Development	Basic+ -> Enterprise	Discord/community moderation, tickets, persona chat, and automation bridge.
Knowledge Base Creation	In Development	Free -> Enterprise	Indexed, memory-linked knowledge hubs.
Custom Commands and Macros	Planned	Basic+ -> Enterprise	Reusable commands, macros, templates, and approvals.
Community Management Panel	Planned	Basic+ -> Enterprise	Moderation, roles, announcements, and member insights.
Personal Dashboards	Planned	Free -> Enterprise	Visibility into usage, automations, memory, and system state.
Multi-language Support	Planned	Premium -> Enterprise	Localized UI and multilingual inference workflows.

Developer and Plugin

Feature	Status	Tier Range	Pricing Role
Open Plugin API	In Development	Basic+ -> Enterprise	Programmatic integration surface for external developers.
Scoped Memory Access	Planned	Basic+ -> Enterprise	Plugin access controlled by scopes, consent, and ABAC.
Trigger-based Automation Engine	Planned	Pro -> Enterprise	Triggers, filters, actions, replay, and SDK workflows.
Skill Marketplace	Planned	Basic+ -> Enterprise	Discovery, review, distribution, monetization, and analytics.

Feature	Status	Tier Range	Pricing Role
Aerealith SDK	In Development	Basic -> Enterprise	TypeScript, Python, REST clients, auth helpers, examples, and harnesses.
CLI Tools / aerealithctl	In Development	Pro -> Enterprise	Local development, packaging, testing, operations, and air-gapped workflows.

Analytics and Observability

Feature	Status	Tier Range	Pricing Role
Usage and Token Meters	In Development	Pro -> Enterprise	Consumption visibility for billing and capacity planning.
Audit Logging	Planned	Pro -> Enterprise	Tamper-evident compliance and security trail.
Grafana Dashboards	In Development	Pro+ -> Enterprise	SLOs, alerting, health, and shared operational visibility.
Feature Flag Resolution	In Development	Free -> Enterprise	Targeted rollout, experiments, and customer-specific behavior.
OTEL Instrumentation	Planned	Internal / Enterprise	Traces, metrics, logs, profiles, sampling, and redaction.

Security and Privacy

Feature	Status	Tier Range	Pricing Role
Zero-Trust Architecture	Planned	Pro -> Enterprise	mTLS, service identity, rotation, and least-privilege enforcement.
Memory Redaction and Review Controls	Planned	Premium -> Enterprise	Sensitive data review, redaction, consent, and retention controls.
Per-Tenant Secret Isolation	Planned	Pro -> Enterprise	Vault/KMS isolation, scoped access, and rotation.
RBAC and ABAC Policy Engine	In Development	Basic -> Enterprise	Role and attribute-based access control.
Compliant Modes	Planned	Enterprise	SOC2, HIPAA, GDPR-aligned logging, retention, encryption, and export controls.
Chaos Engineering Mode	Planned	Premium+ -> Enterprise	Failure validation for plugins, inference, automations, and infrastructure.

Platform and Deployment

Feature	Status	Tier Range	Pricing Role
Aerealith Web App	In Development	Free -> Enterprise	Primary web experience for chat, automations, analytics, and settings.
Discord Integration	In Development	Free -> Enterprise	Slash commands, context menus, webhooks, and community access.
Android/iOS App	Planned	Free -> Enterprise	Mobile notifications, voice input, offline cache, and device sync.

Feature	Status	Tier Range	Pricing Role
Aerealith Linux Runtime	Planned	Premium+ -> Enterprise	Privacy-first desktop/runtime integration with local AI support.
IoT Agent Support	Planned	Premium+ -> Enterprise	MQTT, device twins, local agents, and smart device automation.
Air-Gapped Deployment Mode	Planned	Enterprise	Offline models, signed artifacts, local registry, and no SaaS dependency.

08

GA Platform Foundation

The General Availability foundation coordinates authentication, context, security, plugin runtime, SDKs, and CLI delivery.

Theme	Required Foundation
Authentication and Identity	Shared auth service, session payloads, multi-provider linking, account/workspace identity model.
Context Intelligence	Context engine that fuses memory, telemetry, retention controls, retrieval behavior, and source provenance.
Security and Policy	Zero-trust policy evaluation, audit pipelines, entitlement enforcement, and signed security events.
Plugin Ecosystem	Sandboxed runtime, capability manifests, plugin lifecycle management, review, publishing, and takedown flows.
Developer Surface	TypeScript SDK, REST API, CLI tooling, local test harnesses, examples, and integration packaging.
Billing and Usage	Real-time usage events, invoice previews, quota warnings, payment status, overage rules, and plan changes.
Self-Hosted Bridge	Node authentication, bridge policies, local/hosted metering boundary, and reconnect-safe usage sync.

Foundation Rule

GA customers receive a coherent experience across authentication, policy enforcement, developer tooling, marketplace governance, self-hosting, and platform extensibility.

PART 03

Pricing math, AI credits, API limits, and automation

The pricing system exposes simple public plans while internally maintaining explicit cost budgets, fair-use limits, and usage records.

09

Pricing Math and AI Credit Allocation

Pricing uses explicit internal math so tiers, add-ons, and quotas can be evaluated against expected infrastructure cost.

Tier Formula

Monthly Tier Price = AI Cost Budget + Storage Budget + Memory Budget + Automation Budget + API Budget + Platform Overhead + Margin.

AI Cost Budget = Monthly Tier Price x AI Allocation Percentage.

Included AI Credits = AI Budget / USD 0.001.

Examples

Premium: USD 10 x 0.35 = USD 3.50 AI budget.
Premium: USD 3.50 / USD 0.001 = 3,500 credits/month.

Pro+: USD 25 x 0.40 = USD 10.00 AI budget.
Pro+: USD 10.00 / USD 0.001 = 10,000 credits/month.

Tier	Price	AI Allocation	AI Budget Math	Included AI Credits / Month
Free	\$0/mo	Subsidized	Fixed subsidy	250
Basic	\$3/mo	25%	\$3/mo x 25% / \$0.001	750
Basic+	\$6/mo	30%	\$6/mo x 30% / \$0.001	1,800
Premium	\$10/mo	35%	\$10/mo x 35% / \$0.001	3,500
Premium+	\$15/mo	35%	\$15/mo x 35% / \$0.001	5,250
Pro	\$20/mo	35%	\$20/mo x 35% / \$0.001	7,000
Pro+	\$25/mo	40%	\$25/mo x 40% / \$0.001	10,000
Enterprise	Custom	Contract-defined	Contract-defined	Custom

Credit definition: One AI credit equals the current internal pricing unit for hosted AI work. A hosted request may consume one or more credits depending on model, context size, media processing, tools, retrieval, and completion length.

10

Storage, Memory, and Knowledge Capacity

Storage, memory, and knowledge capacity are separated because each has different user expectations and cost behavior.

Tier	Cloud Storage	Hosted Memory	Knowledge Storage	Max Knowledge Docs	Retention	Storage Burden	Memory Burden
Free	5 GB	500 MB	2.5 GB	250 docs	30 days	\$0.50	\$0.10
Basic	10 GB	1 GB	5 GB	500 docs	90 days	\$1.00	\$0.20
Basic+	25 GB	2.5 GB	10 GB	1,000 docs	180 days	\$2.50	\$0.50
Premium	50 GB	5 GB	25 GB	5,000 docs	1 year	\$5.00	\$1.00
Premium+	100 GB	10 GB	50 GB	10,000 docs	2 years	\$10.00	\$2.00

Tier	Cloud Storage	Hosted Memory	Knowledge Storage	Max Knowledge Docs	Retention	Storage Burden	Memory Burden
Pro	250 GB	25 GB	100 GB	25,000 docs	3 years	\$25.00	\$5.00
Pro+	500 GB	50 GB	250 GB	50,000 docs	5 years	\$50.00	\$10.00
Enterprise	Custom	Custom	Custom	Custom	Contract-defined	Contract-defined	Contract-defined

Storage Math

Estimated Cloud Storage Burden = Included Cloud Storage GB x USD 0.10 / GB / month.
Premium: 50 GB x USD 0.10 = USD 5.00 / month.
Pro+: 500 GB x USD 0.10 = USD 50.00 / month.

Memory Math

Estimated Memory Burden = Included Hosted Memory GB x USD 0.20 / GB / month.
Premium+: 10 GB x USD 0.20 = USD 2.00 / month.
Pro+: 50 GB x USD 0.20 = USD 10.00 / month.

Margin watch: Pro and Pro+ include aggressive storage capacity for competitive positioning. These limits must be monitored against actual blended storage cost and fair-use behavior.

11

API Rate Limits and Developer Access

Developers are not charged for API access. They are limited by request volume, request weight, and associated AI/ resource consumption.

Tier	Requests / Minute	Requests / Hour	Requests / Day	Requests / Month	Monthly Math
Free	60	1,000	1,000	25,000	Fixed onboarding allowance
Basic	120	2,500	5,000	100,000	5,000 x 20 active days
Basic+	300	7,500	15,000	300,000	15,000 x 20 active days
Premium	600	20,000	50,000	1,000,000	50,000 x 20 active days
Premium+	1,200	50,000	100,000	2,500,000	100,000 x 25 active days
Pro	3,000	125,000	250,000	7,500,000	250,000 x 30 active days
Pro+	6,000	500,000	1,000,000	25,000,000	1,000,000 x 25 active days
Enterprise	Custom	Custom	Custom	Custom	Contract-defined

Rate Limit Math

Basic: 5,000 requests/day x 20 active days = 100,000 requests/month.

Premium+: 100,000 requests/day x 25 active days = 2,500,000 requests/month.

Pro+: 1,000,000 requests/day x 25 active days = 25,000,000 requests/month.

Required Response Headers

```
X-RateLimit-Limit-Minute: 600
X-RateLimit-Remaining-Minute: 422
X-RateLimit-Reset-Minute: 2026-05-30T18:41:00Z
X-Aerealith-Request-Weight: 10
X-Aerealith-Usage-Scope: saas
X-Aerealith-Entitlement-Source: base_plan
```

Request Class	Example	Weight
Lightweight	Read profile, list settings, fetch metadata	1
Standard	Create task, update memory, run simple query	2
Heavy	Search knowledge base, run plugin, process document	10
AI-backed	Hosted AI request through API	25 + AI credits
Bulk	Batch import, export, sync operation	50-500
Enterprise	Large tenant operation	Contract-defined

12

Automation Model

Automation is a core value driver and a primary expansion path.

Tier	Active Automations	Automation Runs / Month	Notes
Free	3	100	Testing and learning
Basic	10	1,000	Personal workflows
Basic+	25	5,000	Creator workflows
Premium	75	15,000	Advanced automation
Premium+	150	40,000	Developer workflows
Pro	300	100,000	Team automation
Pro+	750	300,000	Large-scale operations
Enterprise	Custom	Custom	Dedicated infrastructure

Automation Categories

- Productivity automation
- Communication automation
- AI automation
- Developer automation
- Business automation
- IoT automation
- Data automation
- Backup and sync workflows
- Workflow approvals
- Audit-friendly automation

High-impact action rule: Destructive, irreversible, sensitive, regulated, or production-impacting actions require confirmation, policy evaluation, approval records, and audit logging.

PART 04

Self-hosted runtime and modular add-ons

Local-first deployment remains open. Paid SaaS resources begin only when hosted infrastructure is explicitly used.

13

Self-Hosted Runtime and SaaS Bridge

The self-hosted runtime is free and open source. SaaS resources are consumed only when explicitly linked and used.

Mode	Description	Cost
Local Only	Fully local deployment	Free
Linked Personal	Connected to personal SaaS account	Uses plan
Linked Team	Connected to organization account	Uses plan
Hybrid Cloud	Local-first with cloud fallback	Plan + add-ons
Enterprise Self-Hosted	Managed deployment	Custom
Air-Gapped	Fully isolated deployment	Custom

Metering Rule

Local usage is not SaaS usage. SaaS usage begins only when Aerealith-hosted infrastructure performs work, stores data, processes data, routes traffic, syncs data, hosts a connector, calls a hosted model, or provides managed control-plane functionality.

Bridge identity

Self-hosted nodes must authenticate using scoped node credentials, workspace binding, policy version, and revocation-aware session exchange.

Bridge telemetry

Only SaaS-bound work should be billed as SaaS usage. Local-only telemetry should be opt-in unless required for a paid managed support contract.

Offline behavior

Air-gapped customers require signed bundles, offline license grants, local registry support, and no mandatory SaaS dependency.

Hybrid fallback

Hybrid nodes may fall back to hosted models, hosted search, hosted connectors, or cloud storage only when the customer has enabled that behavior.

14

Add-On Catalog

Add-ons expand capability, capacity, convenience, and professional operations without forcing users into larger base tiers.

Category	Purpose
AI Credit Packs	Hosted AI usage
Automation Packs	Workflow expansion
API Request Packs	Developer scaling
Integration Packs	Specialized connectors
Memory Packs	Expanded memory
Knowledge Packs	Larger knowledge bases
Storage Packs	Cloud storage
Backup Packs	Hosted backups
Governance Packs	Security and compliance
Observability Packs	Monitoring and analytics
Marketplace Packs	Publishing and monetization
Payment & Billing Packs	Embedded payments, billing, checkout, invoicing, and payment operations
Self-Hosted Bridge Packs	Hybrid deployment services
Support Packs	Enhanced support and SLAs

Add-On Design Rules

- Cover real infrastructure costs.
- Expand useful functionality.
- Support specialized use cases.
- Enable organizational scaling.
- Improve convenience.
- Reduce operational burden.
- Add professional controls.
- Provide measurable user value.
- Remain easy to bundle.
- Avoid punitive gating.

15

AI Credit and Automation Add-Ons

AI and automation add-ons are the clearest usage-expansion mechanisms.

Add-On	Price	Internal AI Budget	AI Credits Added / Month	Intended User
AI Starter Pack	\$2/mo	\$1.50	1,500	Light personal usage
AI Builder Pack	\$5/mo	\$4.00	4,000	Regular AI workflows
AI Power Pack	\$10/mo	\$8.50	8,500	Heavy personal or creator usage
AI Studio Pack	\$20/mo	\$17.50	17,500	Developers, creators, advanced users
AI Enterprise Pack	Custom	Contract-defined	Custom	Organizations with predictable high usage

Automation Slot Add-On	Price	Adds
Automation Mini Pack	\$2/mo	+10 active automations
Automation Builder Pack	\$5/mo	+50 active automations
Automation Operator Pack	\$10/mo	+200 active automations
Automation Scale Pack	\$20/mo	+1,000 active automations
Enterprise Automation Pack	Custom	Custom automation capacity

Automation Run Add-On	Price	Adds
Run Pack 5K	\$2/mo	+5,000 runs/month
Run Pack 25K	\$7/mo	+25,000 runs/month
Run Pack 100K	\$15/mo	+100,000 runs/month
Run Pack 1M	Custom	+1,000,000 runs/month

Add-on stacking rule: Add-ons should stack on top of the base plan, but the entitlement service must still enforce safety policies, abuse limits, organization controls, and payment status.

16

Integration, Memory, Storage, and Knowledge Add-Ons

Capability packs are grouped by workflow category and infrastructure type.

Integration Pack	Intended Use	Memory / Knowledge Pack	Purpose
Personal Integrations Pack	Calendar, email, notes, reminders, tasks	Memory Boost	Additional personal memory capacity
Creator Integrations Pack	Social publishing, content platforms, media tools	Memory Vault	Larger long-term memory allocation
Community Integrations Pack	Discord, moderation, tickets, announcements	Shared Memory Pack	Team or organization memory spaces
Developer Integrations Pack	GitHub, CI/CD, issue trackers, deployment hooks	Knowledge Starter	Additional personal documents and embeddings
Business Integrations Pack	CRM, project management, team collaboration tools	Knowledge Team	Shared team knowledge base
IoT Integrations Pack	MQTT, smart devices, local agents, sensor workflows	Enterprise Knowledge Vault	Dedicated or contract-defined knowledge storage
Data Integrations Pack	Databases, exports, warehouses, reporting tools		
Enterprise Systems Pack	SAML, LDAP, SCIM, SIEM, private systems		

Add-On	Price	Adds	Effective Price / GB
Storage 10GB	\$2/mo	+10 GB cloud storage	\$0.20/GB

Add-On	Price	Adds	Effective Price / GB
Storage 100GB	\$7/mo	+100 GB cloud storage	\$0.07/GB
Storage 1TB	\$25/mo	+1 TB cloud storage	~\$0.025/GB
Memory Boost 1GB	\$2/mo	+1 GB hosted memory	\$2.00/GB
Memory Vault 10GB	\$8/mo	+10 GB hosted memory	\$0.80/GB
Memory Vault 50GB	\$25/mo	+50 GB hosted memory	\$0.50/GB
Knowledge 10GB	\$5/mo	+10 GB knowledge storage	\$0.50/GB
Knowledge 100GB	\$20/mo	+100 GB knowledge storage	\$0.20/GB

17

Governance, Observability, and Support

Security exists at every tier. Advanced governance, observability, and support are packaged for professional and enterprise needs.

Governance Packs

Audit Log Extension, Advanced Audit Pack, Team Policy Pack, RBAC+ Pack, ABAC Pack, Compliance Mode Pack, and Data Residency Pack.

Observability Packs

Usage Insights Pack, Automation Debug Pack, Developer Metrics Pack, Team Dashboard Pack, Grafana Advanced Pack, and Enterprise Observability Pack.

Support Packs

Priority Support, Creator Support, Developer Support, Self-Hosted Support, Business Support, and Enterprise SLA.

Pack Family	Base Function	Professional Function	Enterprise Function
Governance	Role and permission clarity	Audit retention, policy controls, approval workflows	Compliance modes, data residency, contract-defined controls
Observability	Usage visibility	Team dashboards, automation debugging, metrics	Dedicated dashboards, SLOs, alerting, evidence exports
Support	Documentation and standard support	Priority support and developer help	Named contacts, escalation paths, SLA, deployment support

PART 05

Payments, marketplace, enterprise, and implementation

The pricing model becomes real through billing flows, marketplace rules, enterprise packaging, entitlements, metering, and auditability.

Payment, Billing, and Embedded Commerce

Payments are both an operational requirement and a platform capability.

Aerealith AI will collect payments for subscriptions, add-ons, marketplace purchases, developer payouts, overages, and enterprise contracts. Over time, it can also support user-facing commerce workflows such as invoices, payment links, paid plugins, creator products, and business automations.

Add-On	Target User	Includes
Billing Starter Pack	Creators and freelancers	Hosted invoices, payment links, receipts, simple tax metadata
Creator Commerce Pack	Creators and communities	Paid downloads, paid templates, donation links, simple subscriptions
Marketplace Seller Pack	Plugin developers	Paid listings, revenue dashboard, payout setup, receipts
Advanced Billing Pack	Businesses and teams	Usage billing, metered billing, plan management, coupons, proration
Payment Analytics Pack	Teams and operators	Approval rates, failed payments, refunds, churn, revenue dashboards
Fraud & Dispute Pack	Marketplace sellers	Fraud scoring, disputes, chargeback evidence, velocity rules
White-Label Billing Pack	Pro+ and Enterprise	Branded invoices, branded checkout, billing portal, custom domain
Enterprise Billing Pack	Enterprise	Annual invoicing, purchase orders, custom terms, contract billing

Payment Partner Requirements

Subscription billing

Usage-based billing

Marketplace or split-payment support

White labeling

Tokenization

PCI compliance support

Fraud tools

Chargeback management

Global payment methods

Reporting and reconciliation

Uptime and support SLAs

Developer-friendly APIs and SDKs

Billing lifecycle
Checkout, subscription creation, plan changes, add-ons, invoices, taxes, retries, dunning, refunds, credits, disputes, cancellation, and account state changes.

Usage lifecycle
Event capture, request weighting, aggregation, quota warnings, invoice preview, overage calculation, final invoice, and historical audit record.

Developer Marketplace and Enterprise Boundaries

The marketplace enables plugin distribution while Enterprise represents contractual and operational obligations.

Publisher Level	Requirement	Capability
Community Publisher	Aerealith AI account and accepted terms	Publish free public plugins after review
Verified Publisher	Identity or organization verification	Verified badge and higher trust
Commercial Publisher	Payment onboarding and tax/payout setup	Sell paid plugins and subscriptions
Enterprise Publisher	Contract or organization approval	Publish private/ internal marketplace plugins

Enterprise Package	Target Customer	Includes
Enterprise SaaS	Hosted Aerealith AI	SSO, SCIM, audit logs, governance, support, custom limits
Enterprise Hybrid	SaaS plus self-hosted nodes	Control plane, node management, bridge policies, backups, observability
Enterprise Self-Hosted	Internal deployment	Deployment support, private marketplace, policies, support contract
Enterprise Air-Gapped	Isolated/high-security environments	Offline bundles, local registry, signed updates, no SaaS dependency
Enterprise Dedicated	Regulated or high-scale customers	Dedicated infrastructure, custom isolation, data residency, custom SLA

Sale Type	Aerealith AI Platform Fee	Publisher Share
Free plugin	\$0	\$0
Paid plugin one-time purchase	15%	85%
Paid plugin subscription	15%	85%
Enterprise private marketplace	Contract-defined	Contract-defined
Aerealith AI-certified partner plugin	Negotiated	Negotiated

Marketplace boundary: Marketplace purchases are productized platform transactions. Enterprise private marketplaces are contractual operating models and may override default fee structures through a written agreement.

20

Entitlement and Implementation Architecture

Pricing is implemented through centralized entitlements, metering, billing, usage dashboards, policy evaluation, and audit records.

Required Service	Responsibility
Entitlement Service	Determines what an account, user, workspace, API key, plugin, or node can access.
Metering Service	Records usage events and aggregates consumption.
Billing Service	Converts subscriptions, add-ons, usage, invoices, taxes, coupons, credits, and adjustments into a financial record.

Required Service	Responsibility
Usage Dashboard API	Exposes summaries, warnings, projections, and invoice-preview data to the user interface.
Bridge Auth Service	Authenticates self-hosted nodes and issues scoped node tokens.
Marketplace Service	Handles plugin publishing, review, installs, purchases, revenue share, and payouts.
Policy Service	Applies governance, compliance, plan rules, enterprise policies, and organization-level restrictions.
Audit/Event Service	Produces immutable billing, entitlement, policy, bridge, marketplace, and administrator event records.

Bad Pattern

```
if user.tier == "premium_plus":
    allow_advanced_automation()
```

Correct Pattern

```
if
entitlement_service.has("automation.advanced_triggers.enabled"):
    allow_advanced_automation()
```

Core Architecture Rule

The application does not ask whether a user is Premium+. It asks whether the subject has the entitlement required for the action and enough remaining quota.

Entitlement Key Examples

Capability Area	Example Entitlement Key	Quota / Value Type
AI	ai.hosted_credits.monthly	integer monthly balance
Automation	automation.active_slots.max	integer limit
Automation	automation.runs.monthly	integer monthly balance
API	api.requests.monthly	weighted monthly balance
Memory	memory.hosted_storage.gb	decimal GB
Knowledge	knowledge.documents.max	integer limit
Marketplace	marketplace.publisher.commercial.enabled	boolean
Self-Hosted	bridge.node_registration.enabled	boolean or contract grant
Governance	audit.retention.days	integer days
Enterprise	deployment.air_gapped.enabled	contract grant

Billing and Enforcement Behavior

Subscription state, payment status, plan changes, and quota consumption should affect access in a predictable and auditable way.

Event	System Behavior	User-Facing Behavior
New subscription	Create plan grant, initialize quotas, record billing event.	Plan features become available after payment confirmation.
Plan upgrade	Apply new entitlement set, prorate or invoice according to billing rules.	Higher limits become available immediately or after payment processing.
Plan downgrade	Schedule lower entitlement set, evaluate over-limit resources.	User receives warnings and time to reduce usage when practical.
Add-on purchase	Attach add-on grant and quota extension to subject scope.	Additional capacity appears in usage dashboard.
Failed payment	Enter grace, retry, or restricted state according to plan rules.	User sees billing action required before hard restriction.
Quota exceeded	Deny or throttle action unless add-on/overage is enabled.	User receives clear explanation and upgrade/add-on path.
Cancellation	Stop renewal and schedule entitlement removal at period end unless policy requires immediate action.	User retains paid access until end of current term unless abuse or fraud applies.
Enterprise contract change	Apply contract grant and custom policy bundle.	Limits and support behavior follow signed agreement.

Data preservation rule: Downgrades and cancellations should avoid destructive deletion by default. Over-limit data may become read-only, archived, hidden, queued for deletion after retention windows, or managed through export/reduction workflows.

22

Legal, Tax, and Policy Alignment

The pricing model must remain consistent with public policies, payment processor rules, enterprise contracts, and implementation reality.

Area	Required Alignment
Terms of Use	Plans, cancellation, usage, AI output, user responsibility, APIs, marketplace, and termination behavior.
Billing Policy	Renewals, refunds, credits, add-ons, overages, failed payments, trials, taxes, downgrades, and cancellations.
Privacy and Data Policies	User data ownership, no-sale commitment, data processing, retention, exports, deletion, and research use.
Security Policy	RBAC/ABAC, secrets, audit logs, self-hosted responsibilities, API security, and marketplace/plugin risk.
Developer Policy	API use, SDKs, plugins, data handling, attribution, security, rate limits, and marketplace publishing.

Area	Required Alignment
Payment Processor Compliance	Prohibited transactions, restricted activity, chargebacks, sanctions, payouts, fraud, and marketplace payment rules.
Enterprise Agreements	Custom limits, support obligations, data residency, air-gapped deployment, dedicated infrastructure, SLA, and notice requirements.

23

Final Rules to Preserve

These rules anchor the pricing model unless replaced by a later pricing decision.

- Free users get 3 active automations and a useful onboarding allowance.
- Automation capacity increases by subscription tier and can be expanded with add-ons.
- Developers are not charged merely for API access.
- Developers are limited by request volume, request weight, AI credits, and fair-use controls.
- API limits reset regularly and should be exposed through standard response headers.
- Developers can buy additional request capacity without changing the base plan.
- Developers can build integrations and plugins freely within policy and security boundaries.
- The self-hosted runtime remains free and open source.
- Self-hosted deployments are local-first and do not consume SaaS usage unless they call Aerealith-hosted resources.
- SaaS is optional for self-hosted deployments and should be explicit when enabled.
- Local usage is not metered as SaaS usage.
- Add-ons expand capability, capacity, convenience, or professional controls without punishing users.
- Enterprise represents obligations, support, compliance, contract terms, custom deployment, and operational complexity.
- Public pricing must remain understandable even if entitlement logic is detailed internally.

Closing Statement

Aerealith AI uses a hybrid monetization model built around base subscription tiers, modular add-ons, and a free open-source self-hosted runtime. The model preserves openness, developer access, and local control while monetizing convenience, managed infrastructure, scale, compliance, and cloud-backed resources.

Aerealith AI - A companion for a more connected world
